

## 42V, 100% Duty Cycle CC&CV Buck Converter

### DESCRIPTION

BLL2740 has an optimum input voltage, step-down converter that operates in either CV (Constant Output Voltage) mode or CC (Constant Output Current) mode. The maximum input voltage is up to 42V and the operation input voltage from 8.5V to 32V.

MOSFET, what build in 55mΩ high-side and 30mΩ low-side, could deliver up to 3.5A of continuous output current and the output current accurate to within ±7%.

No external compensation component requirement. The line compensation and the constant current can be set by an external resistance.

Independent output voltage protection suits for BC1.2 and QC2.0/3.0 dual channel output voltage.

In conclusion, BLL2740 is a full function and high performance, high reliability buck DC-DC converter.

### FEATURES

- 100% duty cycle car charge scheme
- Build in high-side and low-side MOSFET
- Max output current: 3.5A
- Adjustable output voltage,  $V_{FB}=1V$
- Excellent constant current accurate: ±7%
- Constant voltage accurate: ±2%
- No external compensation needed
- Jitter function
- Efficiency: up to 95%
- Adjustable line compensation
- Short circuit protection
- Over voltage protection
- Thermal shutdown protection
- Under voltage lock-out
- Available in SOP-8 package
- ESD HBM >5KV

### APPLICATIONS

- Car DVD
- Black box
- Car charger
- Industry application

## TYPICAL APPLICATION

Dual channel application

Single channel application

- Note:** 1) It is recommended to use C1 and C4 as high-frequency low-ESR capacitors for Rubycon and Wurth.  
 2) The inductor core is recommended for the iron silicone Aluminum ring.  
 3) Pin PRO is float in single channel application.

## PIN DESCRIPTION

Pin #	Name	Description
1	VFB	Feedback voltage
2	GND	Ground
3	SW	Power switching output connect to external inductor
4	PRO	Protection for over output voltage
5	VIN	Power supply input. Place a 2.2µF ceramic capacitor between VIN and GND as close as possible
6	BS	Power to the internal high-side MOSFET gate driver. Connect a 100nF capacitor from BS to VIN
7	CSP	Current sense Input_P
8	CSN	Current sense Input_N

## ABSOLUTE MAXIMUM RATING

Parameter		Value
VIN to GND		-0.3 to 43 V
SW to GND		-0.3 to 34 V
BS to GND		-0.3 to 43V
CSP, CSN, PRO to GND		-0.3 to 25 V
VFB to GND		-0.3 to 6 V
Max operating junction temperature(T <sub>J</sub> )		150°C
Ambient temperature(T <sub>A</sub> )		-40°C to 85°C
Package thermal resistance (θ <sub>JC</sub> )	SOP-8	45°C/W
Storage temperature(T <sub>S</sub> )		-40°C to 150°C
Lead temperature & time		260°C, 10S
ESD (HBM)		>5000V

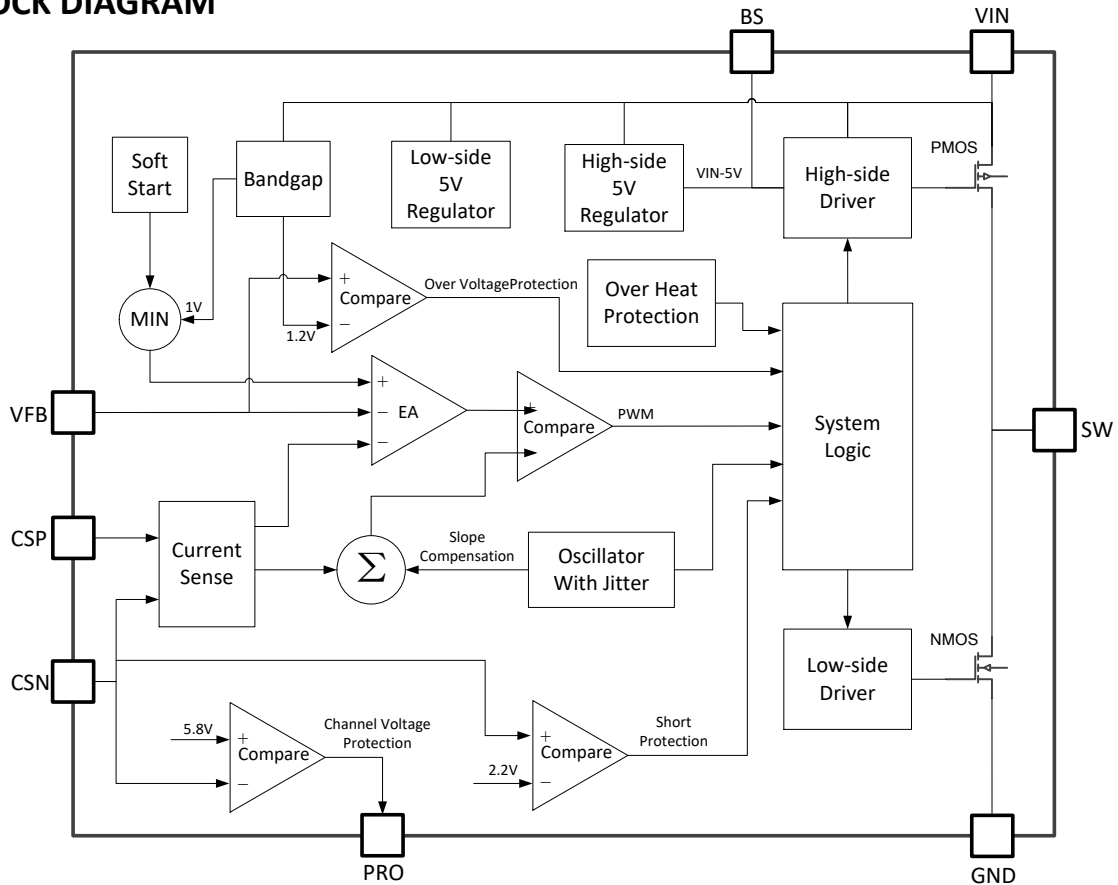

**Note:** Exceed these limits to damage to the device. Exposure to absolute maximum rating conditions may affect device reliability.

## DETAILED DESCRIPTION

### Input Under Voltage Protection

BLL2740 provides an input voltage up to 42V and operates from an input voltage range of 8.5V to 32V. If  $V_{IN}$  drops below 7.5V, the UVLO circuit inhibits switching. Once  $V_{IN}$  rises above 8.5V, the UVLO clears, and the soft-start sequence activates.

### Input Over Voltage Protection

If  $V_{IN}$  rises above 32V, the UVLO circuit inhibits switching. BLL2740 will not be damaged until the voltage exceeds 42V. Once  $V_{IN}$  drops below 30V, the UVLO clears, and the soft-start sequence activates.

### Soft-start

BLL2740 has an internal soft-start circuitry to reduce supply inrush current during startup conditions. When the device exits under-voltage

lockout (UVLO), shutdown mode, or restarts following a thermal-overload event, the soft-start circuitry slowly ramps up current available after 300us.

### Constant Voltage Output

BLL2740 presets the  $V_{FB}$  voltage to 1V. The Output Voltage can be set by extra resistance.

### Output Channel Protection

## Output Over Voltage Protection

Once  $V_{FB}$  rises above 1.2V, BLL2740 shuts down to avoid damage caused by abnormal use of electrical equipment.

## Constant Current Output

BLL2740 senses the current by sampling the voltage difference between the CSP and the CSN, and adjusts the output current to the default value by the loop.

$$I_{OUT} = \frac{50mV}{R_{ISEN}}$$

Constant current operates normally when CSN is higher than 2.4V. When CSN is below 2.2V causing by overload, BLL2740 will enter short circuit protection mode.

## Short Circuit Protection

When CSN drops below 2.2V since too heavy load, BLL2740 will enter short circuit protection function,

and the system will enter hit-cup mode, and frequency drop to 34KHz per cycle and stop switching for 300mS.

## Line Compensation

When users use different cables, it will produce different voltage drop, the users can set their own cable compensation voltage according to the need:

$$V_{cable\ compensation} = 1.6\mu A * R1 * \frac{V_{CSP} - V_{CSN}}{50mV}$$

## Thermal Shutdown

The junction temperature of the IC is monitored internally. If the junction temperature exceeds the threshold value (typically 155°C), the converter shuts off. This is non-latch protection. There is about 30°C hysteresis. Once the junction temperature drops around 125°C, it initiates a Soft-start.
